Project Details

2024 - Present

Growing Flowers Software Solution

- Role - Software Developer.
- Technology - JavaScript, Angular, Angular Material, Java, MongoDB.
- Responsibilities - Collaborate with designers, product teams, and backend developers to translate requirements into high-quality features.

At Growing Flowers Software Solutions, we build elegant, scalable, and user-centric digital solutions through expert web development, innovative cloud services, and intuitive app development.

My role focuses on architecting a future-ready, scalable framework for the product. I have developed an Angular-based widget architecture and ensured smooth communication with backend REST APIs.

2022 - 2024

PatSeer

- Role - Front End Developer.
- Technology - Angular 7+, Angular Material, JavaScript.
- Responsibilities - Create, generate UI & Deliver features.

PatSeer is a provider of products and custom software solutions for patent research, data analysis, and project management.

It offers AI-driven capabilities, analytics, visualization tools, as well as the ability to conduct non-patent literature searches from within the product.

My main role is to develop a sustainable and scalable framework for the product. We have developed a widget framework based on Angular for the UI and connected it with REST API for the server-side.

2020 - 2020

Chavare Engineers (Array Pointer Software Solution)

- Role - Front End Developer.
- Technology - Angular 7+, Angular Material, JavaScript.
- Responsibilities - Create, generate UI & Deliver features

I was part of the platform model team, where our primary task was to provide environmental solutions in a graphical format.

My role specifically involved developing a user interface (UI) that enables users to capture and modify knowledge.
